Microsoft Patchday Summary March 13, 2018 · Security Updates for Windows.. Aiseesoft PDF to Word Converter 3.3.26 Patch [CracksNow] free downloadQ: Can a child of a conformal factor be conformal? Let $\Omega \subset \mathbb{R}^2$ and let $f \in C^2$ be a conformal map, mapping Ω onto itself. I would like to know whether, given any $\Omega_1 \subset \Omega$, $f^{-1}(\Omega_1) \subset \Omega$ is also conformal in the sense that $f|_{\Omega_1} : \Omega_1 \rightarrow \Omega_1$ is conformal? If not, is it true that $f|_{\Omega_1}$ is the restriction of a conformal map on some larger domain? A: Your problem has a positive answer. Fix a conformal coordinate system $z=(u,v)$ on Ω . Then, a priori, there exists $R, \epsilon > 0$ so that $B(0,R) \subset \Omega^\epsilon$. In fact, fixing $z_0 \in B(0,R)$, we have that $f^{-1} \circ u = u \circ f$ for all $z \in B(z_0, \epsilon)$. So $f|_{\Omega_1}$ is an orientation-preserving diffeomorphism on $B(z_0, \epsilon)$ (and hence on Ω). Now suppose, for some $z_0 \in B(0,R)$, that $f^{-1} \circ u$ is C^1 in some neighborhood $U \subset \Omega^\epsilon$. Then we have that $\frac{\partial}{\partial z} f \cdot \frac{\partial}{\partial z} (f^{-1} \circ u) = \frac{\partial}{\partial z} f \cdot \frac{\partial}{\partial z} u = 1$ so that
